

## MOBILE APPLICATION

1. Survey application will appear in your application drawer. Select it to launch the application.
2. Select Get Blank Form to download blank forms you can fill out. By default, Spageo Data Collect gets forms from a demo installation of Spageo Data Collection we have.
3. The list of forms you see is from this demo server. Select a form that you want to enter data into. Widgets, New Widgets and Geo Tagger are good examples of forms.

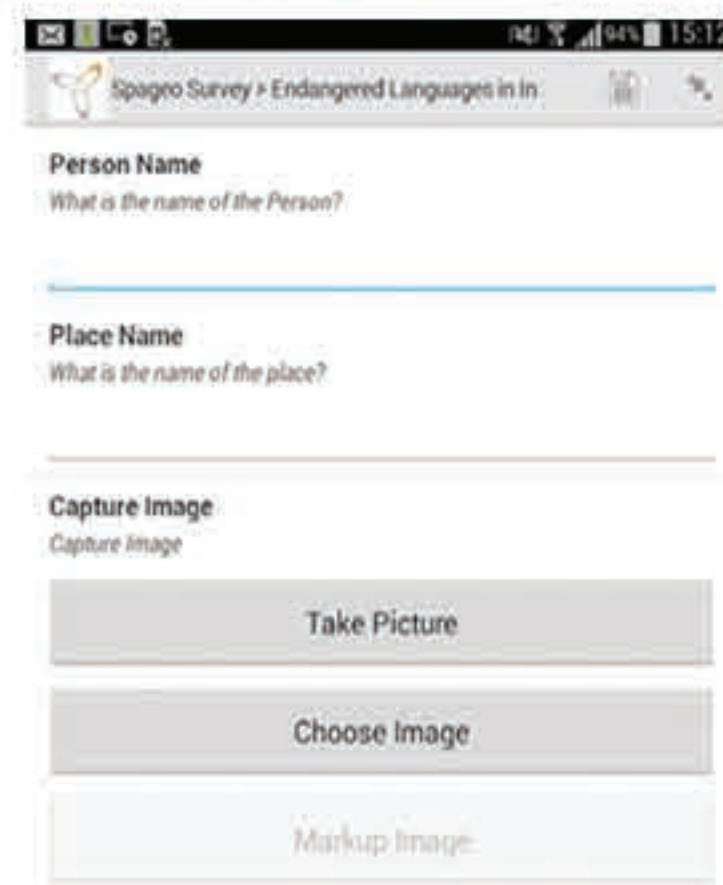

### Application Selection

### Application start page

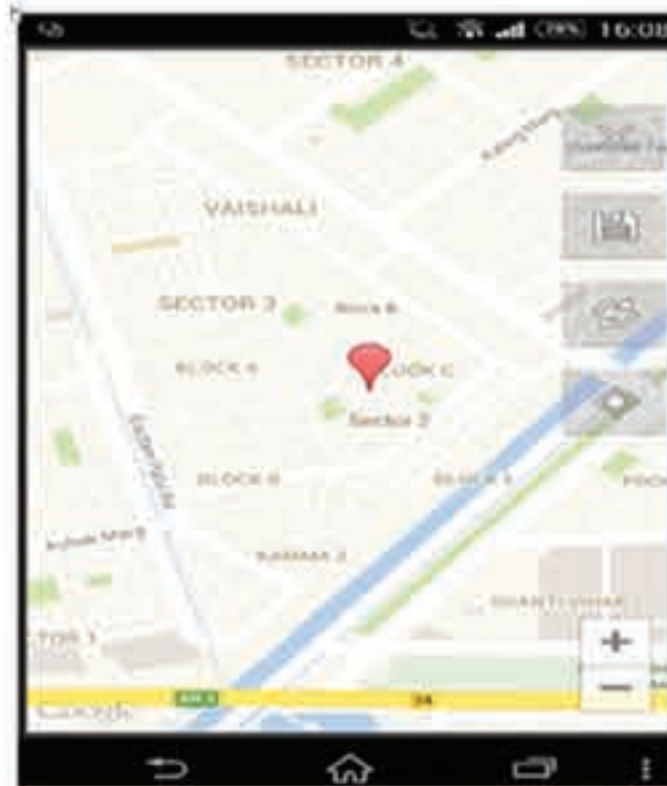

### Name, Place and Image selection

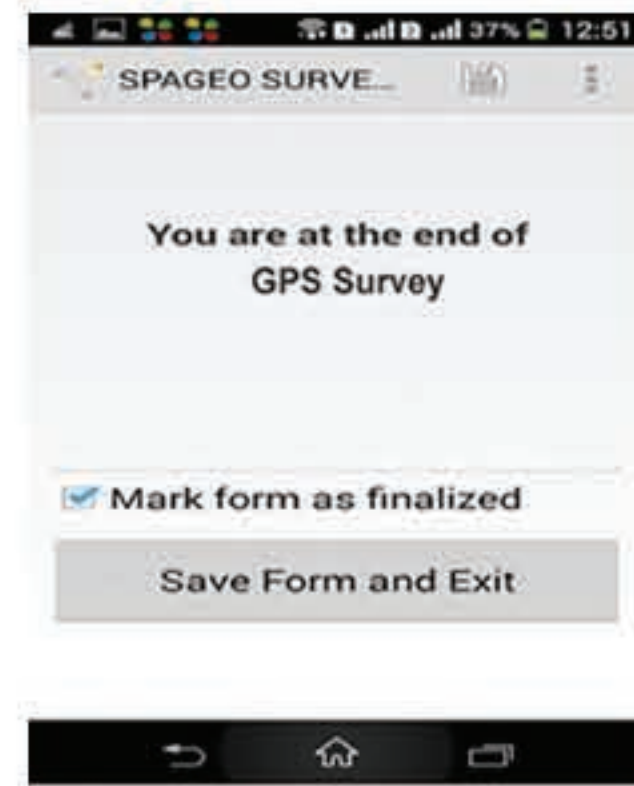

### View or Change location

### Grid map of the selected area

### Confirmation

## WEB APPLICATION

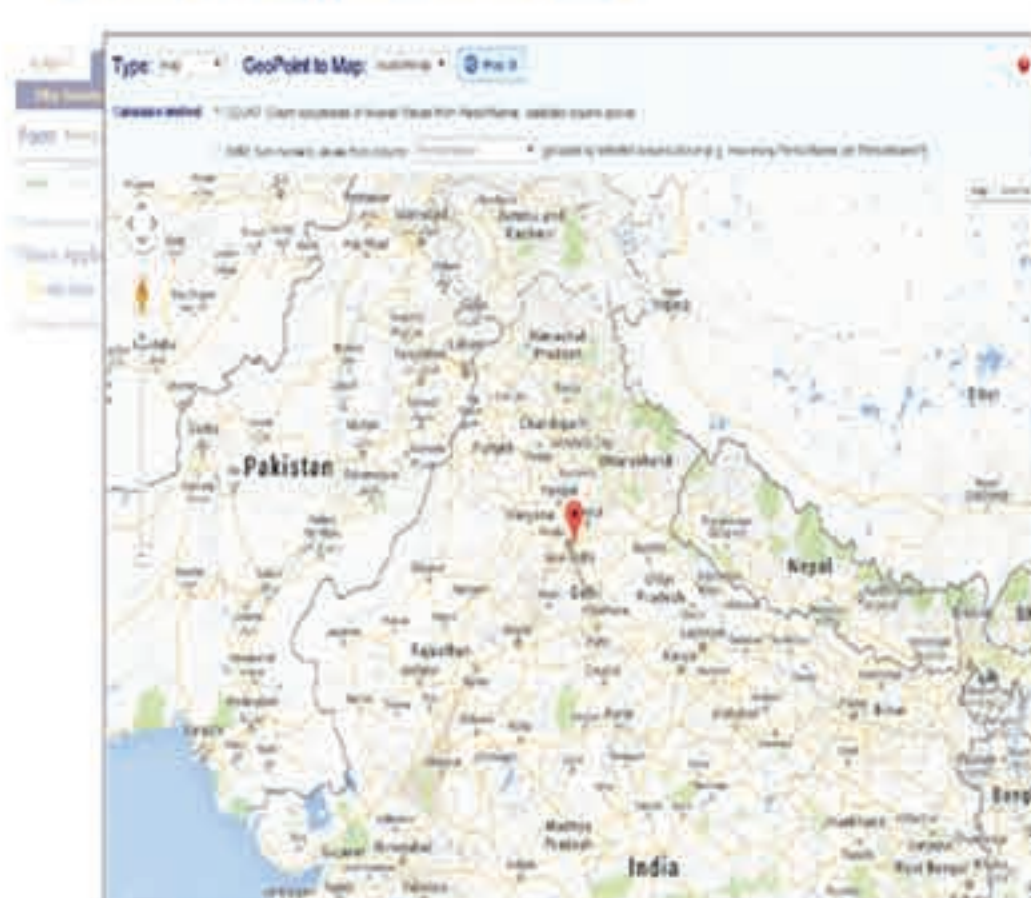

Survey application can be deployed on Google's App Engine, enabling users to quickly get running without facing the complexities of setting up their own scalable web service. Spageo Data Collection can also be deployed locally on a Tomcat server (or any servlet 2.5-compatible web container) backed with a MySQL database server.

Beginning with Spageo Data Collection, upon the initial installation of the server, it is configured to allow unauthenticated (anonymous User) submissions from SPAGEO COLLECTION and unauthenticated browser access to the submissions and forms management functionality of Spageo Data Collection. When the URL to the Spageo Data Collection server is first opened, you will be presented with the application page showing the Submissions and Form Management tabs..
